Each of the following two histograms represents the distribution of acceptance rates (percent accepted) among 25 business schools in 1995. The histograms use different class intervals but are based on the same data. In each class interval, the left endpoint is included but not the right.

- What percent of the schools have an acceptance rate of less than 20%?
- Where (approximately) is the median?
- What is the bin width of each histogram?

There are multiple lists published each year of schools in a wide range of criteria, such as academic or sports performance, university acceptance rates, student satisfaction and teacher/student ratio.
